OBJECTIVES

I have worked in the micro-finance sub-sector of the finance industry for about a decade. Half of this period till date, I spend as an entrepreneur, designing products and strategies to meet the needs of nano, micro and small scale businessmen and women within my niche. As a result, I have developed a close commitment to and passion for small business management, financing, as well as strategic development.

Furthermore, my professional training in accountancy, finance and strategic management under the distinguished Institute of Chartered Accountants of Nigeria (ICAN), has honed my skills and prepared me for even greater challenges within the profession. Hence, I have the competence and ability to add value in the accounting or management discipline of any organization with profit or non-profit orientation.

Finally, I wish to add that my proficiency in python programming and SQL endows me with the capacity to analyze and manage data. I can also use excel as well as Sage 50 to complete assigned tasks.
